

Pharma Strategy Analysis Report

CONFIDENTIAL - INTERNAL USE ONLY

1. Executive Summary

Thesis: India is self-sufficient in human insulin but relies on imports for novel analogs. PLI scheme offers opportunity to localize analog production.

Metric	Assessment
Confidence	High
Commercial Potential	High

2. Market Opportunity

Therapy Area: Diabetes (Insulin)

Target Geography: India

Market Size: \$1,500,000,000

CAGR (3-Year): 12.5%

Supply Chain & Trade Risks (EXIM Data):

- Export Volume: 800,000 units
- Dependency Risk: Low

3. Clinical Landscape (2 Active Trials)

NCT ID	Title	Phase	Status
NCT03334444	Oral Insulin Phase 3 Study	Phase 3	Recruiting
NCT04445555	Weekly Insulin Icodec in India	Phase 3	Active

4. Patent Intelligence (2 Key Patents)

- IN223344: Method for Insulin Glargine Production (Expires: 2025-03) [FTO: Low]
- IN556677: Novel Ultra-Rapid Insulin Formulation (Expires: 2035-11) [FTO: High]

5. Strategic Recommendation

Recommended Path: Domestic Manufacturing Expansion (PLI Scheme)

Timeline: 2-3 years for capacity expansion

Pharma Strategy Analysis Report

CONFIDENTIAL - INTERNAL USE ONLY

Next Steps:

- Apply for PLI benefits
- Scale up fermentation capacity
- Develop biosimilar Aspart/Lispro
